

## Question models to support language Functions in math's problems

If a cup of tea at school costs 10p and I wanted 1 cup a day.  
How much would it cost me for a week?

What information/facts do we know?

A cup of tea costs 10p.

How many cups of tea do I want?

You want 5 cups because there are .....

(Discuss number of days in the working week so conclude there are 5)

On Monday I would have 1 cup of tea. That would be 10p  
On Tuesday ..... That would be 20p etc

Are there any other ways of finding the cost?

We could times 5 times 10 pence.

(Encourage use of language linked to multiplication)
