

Subscribing to a podcast using podcast aggregators (iTunes)

One common podcast aggregator is iTunes, but there are many others. This free software is available for both PCs and MACs. iTunes can be downloaded from Apple website <http://www.apple.com/uk/itunes/download/>

Once the software has been downloaded and installed, open iTunes and click on Podcasts icon from the Library. Then click on “Advanced” button from the drop down menu select “Subscribe to Podcasts” link.

Paste the URL of RSS feed into the new pop up window and click OK button.

iTunes will add the channel to the Podcast' Library and by clicking on the triangle next to the channel's name you will be able to see the all episodes which make up the channel.
