

Hackney Primary Science Days – March 2009

Rocket mice, digital microscopes, giant bubbles and structures made from marshmallows and spaghetti were all part of the fun at this year's Primary Science Day at The Bridge Academy.

Bridge hosted the event for a hundred children in Years 3 to 6 (7-11 years old) and their teachers on 26 and 27 March. The workshops were run by the Trust's primary and secondary science consultants Kate Bradley, Naomi Hiscock, Marilyn Martin, Yeasmin Mortuza and Bukky Yusuf.

In between the workshops were science quizzes where children chose the correct answers using handheld voting pods. All the children then presented science projects to a team of judges led by Jon Evans (gifted and talented coordinator). Lauriston won the science project competition for Years 3 and 4 with St Mary's winning for Years 5 and 6.

Everyone involved had a great time as you can see from the photographs.

Project work from year 5/6 children at St Mary's

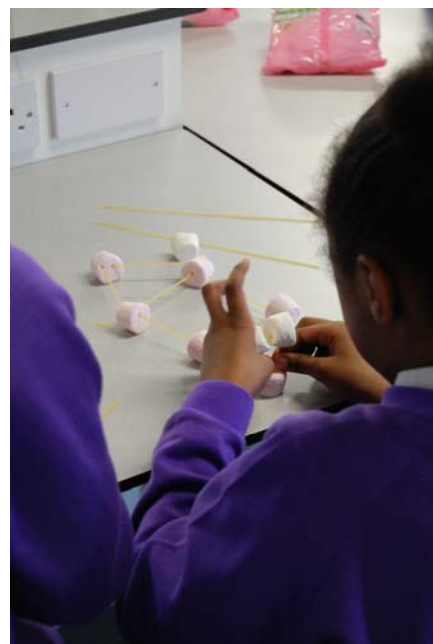

Children enjoying exploring different materials

Making close observations

Measuring the force to pop out a toy's tongue

Building a tower of spaghetti and marshmallows
